

The American Journal of Botany, the flagship journal of the **Botanical Society of America**, publishes peer-reviewed, innovative, significant research of interest to a wide audience of plant scientists in all areas of plant biology (structure, function, development, diversity, genetics, evolution, systematics), all levels of organization (molecular to ecosystem), and all plant groups and allied organisms (cyanobacteria, algae, fungi, and lichens).

In 2017, the **American Journal of Botany** celebrates its 104th year of publication and service to the botanical community.

As one of the top research journals in the plant sciences, much of our content is in demand across **Central and Southeast Asia**. In fact, users from the Philippines, Malaysia, India, Indonesia, Pakistan, and Thailand consistently rank in the top 25 countries making attempts to access **AJB** articles.

Founded in 1893, the Botanical Society of America is one of the world's largest organizations devoted to the study of plants.
