

JLB

JOURNAL OF LEUKOCYTE BIOLOGY

2017 SUBSCRIPTIONS

Content and Influence

For over 40 years, the *Journal of Leukocyte Biology* has published high quality peer-reviewed original experimental research that provides new insights into the function of leukocytes and stromal cells at the molecular, structural, cellular and systemic levels. This research further explores the origins and developmental biology, biochemistry and functions of granulocytes, lymphocytes, mononuclear phagocytes and other cells involved in host defense and inflammation.

The journal emphasizes the community of its authors and offers extensive editorials and commentaries. New online features focus on authors and building professional networks for collaborations. The journal is published by the Society for Leukocyte Biology with the goal of promoting and extending current understanding of the importance of leukocyte biology, particularly in regard to the physiology of these cells and their relationship to the immune system.

Editorship

Luis J. Montaner, DVM, MSc, DPhil, The Wistar Institute, serves as Editor-in-Chief and leads a team of associate editors, editorial board members, and manuscript reviewers from research centers around the world.

Authority & Impact

The Journal's **2015 Impact Factor is 4.165**. The *Journal of Leukocyte Biology* is number 17 among hematology journals and ranks in the top third of immunology journals.

About the Society

Founded in 1971 as the Reticuloendothelial Society, the Society for Leukocyte Biology took its present name in 1984. The goals of the Society are to advance the discipline of leukocyte biology by promoting:

- research and scientific endeavors in the field
- the study of leukocyte biology by young investigators
- the field to a wide audience, including other scientists and people interested in science
- the extension of current understanding of the importance of leukocyte biology, particularly in regard to the physiology of these cells and their relationship to the immune system
- education and further understanding of leukocytes' importance in diseases and their application to biotechnology
